---

Q1. A psychologist named Mihaly Csikszentmihali was fascinated by observing artists who did activities for pleasure, even when they were not rewarded by fame or money. They immersed in their work often forgetting self-care, often experiencing several challenges. He wanted to find out why and how people continue to pursue goals despite challenges. Answer the following:

- a) Name the scientific principle that explains artists' behaviour. (1 Mark)
- b) What are the conditions under which people experience this state? (2 Marks)
- c) What is the relevance of this state for human performance? (2 Marks)

Q2. A 2008 study by Linley found that fewer than one-third individuals have a meaningful understanding of their strengths. Explain:

- a) What (scientific) method is used to measure strengths in psychological sciences and what is the advantage of using this method? (2 Marks)
- b) Using four or more signature strengths can lead to positive experiences at work. Name your signature strength (that you found during the class activity) and explain how you use and overuse it for your academic outcomes. Give examples. (3 Marks)

Q3. Seligman describes a positive psychology technique known as "mindfulness." Describe what is mindfulness? (2 Marks) and how it is relevant to positive psychology? (3 Marks).

Q4. Describe the meaning, nature and scope of emotional intelligence and explain the characteristics of a high emotional intelligence person with suitable example. (2+3=5 Marks)

Q5. What is psychological resilience? Why it is important to succeed in today's world? How does resilience help you to cope with life challenges? (1+2+2=5 Marks)
